

PIVOT DOOR

What is Pivot door

Pivot Doors are an excellent selection for applications that require a large opening with minimal floor space interruption. Not only can some really striking results be achieved with oversized doors, but also make it possible for the door to be of much heavier construction than standard hinged doors.

Feature of Pivot door

The key feature of a pivot door is the location of the offset hinge.

On a traditional terrace door, the hinge is placed on the left or right; the pivot door's hinge is located at the top and bottom of the frame. This location allows the door to pivot left or right.

How Big Can They Be?

Pivot doors can be pretty much as big as you like, and certainly far bigger than a standard door.

Urban Front supply doors up to 1,500mm wide and 3,000mm tall.

But a pivot hinge makes the actual opening size of a door smaller.

Why Have One?

They make a very definite statement and tend to be much more suitable for contemporary homes than standard off-the-shelf doors, where the size limitations can mean things begin to look a little off proportionally.

The real benefit of pivot hinges is the fact that you can have a very large, heavy door on them.

Nowadays, I think a lot more people would rather have one large door instead of double doors because it looks much more contemporary and you do away with a 'slave' door you don't really need.
